FOREWORD

The National Bureau of Plant Genetic Resource (NBPGR), established by the Indian Council of Agricultural Research (ICAR) in 1976 and located at New Delhi, is the National Institute for all the activities pertaining to exploration, acquisition, evaluation, conservation and documentation of Plant Genetic Resources. Its activities are service oriented with primary aim to supply the plant germplasm to various researchers and plant breeders. It is the nodal agency for germplasm collection and as per the need of the country to procure the potential genetic material; systematic efforts have been and are being made to collect the valuable germplasm from different agro-ecological regions.

Division of Plant Exploration and Germplasm Collection (PEGCD) plays a vital role in enriching the national holdings through execution of regular surveys and explorations in order to assemble the new germplasm from various parts of the country. Keeping in view the species wise status of present collections in the gene bank and also the specific requirement of the country, the crop specific and multi-crop explorations are planned and executed in collaborative mode with ICAR crop based institutes, SAUs, KVKs and other stakeholders. For efficient management of germplasm as well as to plan and execute the further collection missions, proper documentation of passport information of indigenous collections is essential. The passport information of all the indigenous collection is serially registered and the collected material is assigned with the national identifier (accession) number namely indigenous collection (IC). For proper utilization of the collected germplasm by the breeders and other users, it is essential to enquire about what material have already been collected from which area and where that may be available. To fulfill this need, PEGCD have started annual compilation of passport information in the form of **Plant Germplasm Reporter: Indigenous Collections (2021)**. I am happy to bring this issue of the year 2022 to user scientists and hope that the information under circulation will prove its usefulness for them. The views and suggestions to improve this service are welcomed.

Director

Pusa Campus, New Delhi- 110012

Summary

In 2021, a total of 38 explorations (involving 16 collaborators) were undertaken across the country wherein 2,600 accessions of various agri-horticultural crops comprising 1596 accessions of cultivated (61%) and 1004 accessions of wild species (39%) were collected from 76 districts covering 20 states and UTs of India. The states and UTs include- Assam, Arunachal Pradesh, Bihar, Chhattisgarh, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Meghalaya, Odisha, Punjab, Rajasthan, Sikkim, Uttarakhand, Uttar Pradesh, West Bengal, Laddakh and Lakshadweep. Of these, 942 accessions (cultivated: 587 and wild species: 355) were collected by the ICAR-NBPGR Headquarters, New Delhi through 18 explorations. A total of 1772 collected accessions were sent to Germplasm Handling Unit (GHU) for conservation, while the remaining accessions were conserved in NGB and those having less seeds were sent for multiplication. Status of germplasm collected in explorations conducted by ICAR-NBPGR and its regional stations/base centres is given below (Table 1 & 2). Significant progress is made, as this year majority of planned explorations (NEP-2021-22) could not be conducted due to restriction on movement in wake of Covid-19 epidemic.

Table 1: Explorations undertaken and germplasm collected

NBPGR-HQs, station/centre	Explorations undertaken	Germplasm collected		
		Cultivated	Wild	Total
Akola	4	259	58	317
Bhowali	2	89	29	118
Cuttack	3	125	186	311
Jodhpur	1	6	32	38

Other economic species	08	<p><i>Dalbergia sissoo</i> (1), <i>Saccharum munja</i> (1), <i>S. spontaneum</i> (2) <i>Indigofera caerulea</i> (1), <i>I. tinctoria</i> (1), <i>Lawsonia inermis</i> (2)</p>

Germplasm accessions collected in different Crop-Groups

Cultivated vs. Wild Germplasm collected

Disclaimer: The IC numbers have been assigned as per procedure of National Genebank. However, accessions with less seed quantity or as vegetative material are multiplied at suitable sites, while the vegetative material are being processed for alternative methods of storage (Field genebank or Tissue culture facility). The IC numbers to such material would be assigned after completion of multiplication/characterization
