## FOREWORD

The National Bureau of Plant Genetic Resource (NBPGR), established by the Indian Council of Agricultural Research (ICAR) in 1976 and located at New Delhi, is the National Institute for all the activities pertaining to exploration, acquisition, evaluation, conservation and documentation of Plant Genetic Resources. Its activities are service oriented with primary aim to supply the plant germplasm to various researchers and plant breeders. It is the nodal agency for germplasm collection and as per the need of the country to procure the potential genetic material; systematic efforts have been and are being made to collect the valuable germplasm from different agro-ecological regions.

Division of Plant Exploration and Germplasm Collection (PEGCD) plays a vital role in enriching the national holdings through execution of regular surveys and explorations in order to assemble the new germplasm from various parts of the country. Keeping in view the species wise status of present collections in the gene bank and also the specific requirement of the country, the crop specific and multi-crop explorations are planned and executed in collaborative mode with ICAR crop based institutes, SAUs, KVKs and other stakeholders.

For efficient management of germplasm as well as to plan and execute the further collection missions, proper documentation of passport information of indigenous collections is essential. The passport information of all the indigenous collection is serially registered and the collected material is assigned with the national identifier (accession) number namely indigenous collection (IC). For proper utilization of the collected germplasm by the breeders and other users, it is essential to enquire about what material have already been collected from which area and where that may be available. To fulfill this need, PEGCD have started annual compilation of passport information in the form of ***Plant Germplasm Reporter: Indigenous Collections***. I am happy to bring this issue of the year 2017 to user scientists and hope that the information under circulation will prove its usefulness for them. The views and suggestions to improve this service are welcomed.

## Summary

In the year 2017, a total of 28 explorations were undertaken across the country wherein 2104 accessions of various agri-horticultural crops, wild relatives of crops and other economic plants were collected from different parts of Andhra Pradesh, A&N Islands, Arunachal Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Himachal Pradesh, Jammu & Kashmir, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Meghalaya, Mizoram, Nagaland, Odisha, Rajasthan, Sikkim, Tamil Nadu, Uttarakhand and West Bengal states (Table 1 & 2). Of these, 786 accessions were collected by ICAR-NBPGR Headquarters, New Delhi through 12 explorations from parts of Arunachal Pradesh, Bihar, Chhattisgarh, Gujarat, Madhya Pradesh, Maharashtra, Mizoram, Nagaland, Rajasthan, Sikkim, Uttarakhand and West Bengal. In addition, a total of 504 herbarium specimens (including 54 unrepresented taxa), 25 seed samples and economic products were also processed and added to the National Herbarium of Cultivated Plants (NHCP), New Delhi.

**Disclaimer:** The IC numbers have been assigned as per procedure of National Genebank. However, accessions with less seed quantity or as vegetative material are multiplied at suitable sites, while the vegetative material are being processed for alternative methods of storage (Field genebank or Tissue culture facility). The IC numbers to such material would be assigned after completion of required procedures.

## Variability in Agricultural and Horticultural crops

	 <p>Variability in Lima bean</p>	
<p>Wild legumes (<i>Cajanus cajanifolius</i> and <i>Cajanus scarabaeoides</i>) from Bastar region</p>	<p>Grain variability in limabean from Bastar region</p>	<p>Seed variability in sorghum collected from south Gujarat</p>
		
<p><i>Musa pushpanjalae</i>: a wild relative of banana from Arunachal Pradesh</p>	<p><i>Holboellia latifolia</i>: a wild edible fruit from Arunachal Pradesh</p>	<p>Variability in legumes &amp; pulses from Nagaland</p>
		
<p>A rare genotype of <i>Solanum aethiopicum</i> from Saiha district</p>	<p>Variability in Chilli collected from Saiha &amp; Lunglei districts</p>	<p>Small sized highly pungent chilli (<i>Dalle khorsani</i>) from Sikkim</p>
