FOREWORD

The National Bureau of Plant Genetic Resource (NBPGR), established by the Indian Council of Agricultural Research (ICAR) in 1976 and located at New Delhi, is the National Institute for all the activities pertaining to exploration, acquisition, evaluation, conservation and documentation of Plant Genetic Resources. Its activities are service oriented with primary aim to supply the plant germplasm to various researchers and plant breeders. It is the nodal agency for germplasm collection and as per the need of the country to procure the potential genetic material; systematic efforts have been and are being made to collect the valuable germplasm from different agro-ecological regions.

Division of Plant Exploration and Germplasm Collection (PEGCD) plays a vital role in enriching the national holdings through execution of regular surveys and explorations in order to assemble the new germplasm from various parts of the country. Keeping in view the species wise status of present collections in the gene bank and also the specific requirement of the country, the crop specific and multi-crop explorations are planned and executed in collaborative mode with ICAR crop based institutes, SAUs, KVKs and other stakeholders.

For efficient management of germplasm as well as to plan and execute the further collection missions, proper documentation of passport information of indigenous collections is essential. The passport information of all the indigenous collection is serially registered and the collected material is assigned with the national identifier (accession) number namely indigenous collection (IC). For proper utilization of the collected germplasm by the breeders and other users, it is essential to enquire about what material have already been collected from which area and where that may be available. To fulfill this need, PEGCD have started annual compilation of passport information in the form of **Plant Germplasm Reporter: Indigenous Collections (2020)**. I am happy to bring this issue of the year 2020 to user scientists and hope that the information under circulation will prove its usefulness for them. The views and suggestions to improve this service are welcomed.

Summary

In 2020, a total of 28 explorations (involving 09 collaborators) were undertaken across the country wherein 1,656 accessions of various agri-horticultural crops comprising 1,049 accessions of cultivated and 607 of wild species were collected from 100 districts covering 20 states of India. The states include Andaman and Nicobar Islands, Assam, Bihar, NCR of Delhi, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Meghalaya, Odisha, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttarakhand, Uttar Pradesh and West Bengal. Of these, 628 accessions were collected by the ICAR-NBPGC Headquarters, New Delhi through 13 explorations. Status of germplasm collected in explorations conducted by ICAR-NBPGC and its regional stations/base centres is given below (Table 1 & 2). Data consisted of eight fields namely accession no., collector no., date of collection, botanical names, common names, vernacular name, district and state. Significant progress was made in execution of planned explorations (NEP-2020-21), of which majority could not be conducted due to restriction on movement in wake of Covid-19 epidemic.

Germplasm accessions collected in different Crop-Groups

Cultivated vs. Wild Germplasm collected

Disclaimer: The IC numbers have been assigned as per procedure of National Genebank. However, accessions with less seed quantity or collected as vegetative material were multiplied at suitable sites, while the vegetative material are being processed for alternative methods of storage (Field genebank or Tissue culture facility). The IC numbers to such material would be assigned after completion of multiplication/characterization
