FOREWORD

The National Bureau of Plant Genetic Resource (NBPGR), established by the Indian Council of Agricultural Research (ICAR) in 1976 and located at New Delhi, is the National Institute for all the activities pertaining to exploration, acquisition, evaluation, conservation and documentation of Plant Genetic Resources. Its activities are service oriented with primary aim to supply the plant germplasm to various researchers and plant breeders. It is the nodal agency for germplasm collection and as per the need of the country to procure the potential genetic material; systematic efforts have been and are being made to collect the valuable germplasm from different agro-ecological regions.

Division of Plant Exploration and Germplasm Collection (PEGCD) plays a vital role in enriching the national holdings through execution of regular surveys and explorations in order to assemble the new germplasm from various parts of the country. Keeping in view the species wise status of present collections in the gene bank and also the specific requirement of the country, the crop specific and multi-crop explorations are planned and executed in collaborative mode with ICAR crop based institutes, SAUs, KVKs and other stakeholders.

For efficient management of germplasm as well as to plan and execute the further collection missions, proper documentation of passport information of indigenous collections is essential. The passport information of all the indigenous collection is serially registered and the collected material is assigned with the national identifier (accession) number namely indigenous collection (IC). For proper utilization of the collected germplasm by the breeders and other users, it is essential to enquire about what material have already been collected from which area and where that may be available. To fulfill this need, PEGCD have started annual compilation of passport information in the form of *Plant Germplasm Reporter: Indigenous Collections*. I am happy to bring this issue of the year 2020 to user scientists and hope that the information under circulation will prove its usefulness for them. The views and suggestions to improve this service are welcomed.

Summary

In 2019, a total of 34 explorations were undertaken across the country wherein 2,169 accessions of various agri-horticultural crops, wild relatives of crops and other economic species were collected from 104 districts located in 20 states of India (Andaman and Nicobar Islands, Arunachal Pradesh, Assam, Bihar, Gujarat, Jammu & Kashmir, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Meghalaya, Mizoram, Nagaland, Odisha, Rajasthan, Sikkim, Tamil Nadu, Uttarakhand, Uttar Pradesh and West Bengal). Of these, 707 accessions were collected by the ICAR-NBPGR Headquarters, New Delhi through 14 explorations conducted. Emphasis was given on collecting germplasm from various diversity-rich, remote/ tribal inhabited, disturbed and under-explored areas mainly in Andaman and Nicobar Islands, Arunachal Pradesh, Gujarat, Jammu & Kashmir, Mizoram, Nagaland, Sikkim and Uttarakhand.

ICAR

Germplasm accessions collected in different crop-groups

Germplasm collected: cultivated vs. Wild germplasm collected

ICAR

Disclaimer: The IC numbers have been assigned as per procedure of National Genebank. However, accessions with less seed quantity or as vegetative material are multiplied at suitable sites, while the vegetative material are being processed for alternative methods of storage (Field genebank or Tissue culture facility). The IC numbers to such material would be assigned after completion of

Notable collections by NBPGR headquarters, New Delhi

- Large variability in grasspea (*Lathyrus*) for biomass, earliness, plant architecture, leaf width, grain size and colour, and salinity tolerance was observed in parts of West Bengal. It was observed that boro rice has replaced areas of grass pea in Purbi Medinipur district due to increased irrigation facility. Small seeded types are preferred over bold seeded because it requires low moisture for germination. Information on occurrence of lathyrism was not reported in surveyed areas.
- *Ocimum americanum* having high aroma with good population observed in Asola Bhati forest area; *Cucumis melo* var. *alwarensis* locally known as 'Arya' collected from Jatauli, Pataudi (Gurugram) area of Haryana, (being cultivated in limited pocket); round shaped 'Foot kakari' (*C. melo*) from Jatauli, Pataudi (Gurugram); *Momordica balsamina* and *Momordica charantia* var. *muricata* (growing in ravines in Tizara area of Alwar district, consumed as vegetable by locals); 'Bajri' local landrace of pearl millet, grown in limited areas (plant height 10-12 ft, narrow candle shaped panicle, also used as fodder) in Mokalvas, Pataudi (Gurugram) and dark brown seeded wheat (may be introduced type, maintained by a farmer) collected from Budhera, Farukhnagar (Gurugram) supposed to have nutritional traits, were some of the interesting collections/observations from NCR of Delhi and adjoining parts of Haryana and Rajasthan.
- Rapid erosion of local varieties and wild relative's diversity of almost all the crops was noted due to urbanization activities in NCR region. Significant high use of pesticides was identified to erode many potential wild germplasm- kachri, makoi, etc. that were usually abundant in the farmers' field and some protected areas around the farmer's fields are still holding poor populations of these wild species. Good population of *Sesame*, cucurbits and other potential crops of *kharif* season were frequently observed.
- Variability for early and late types, plant height, seed shape, size and colour was observed in *Cucurbita moschata*, sesame and maize. Indigenous knowledge on *Cucurbita moschata* having white coloured fruits locally known as *Chakti* was documented. Farmers have informed that presently, its cultivation has declined in many parts of Haryana and Rajasthan. Local tribal people of Alwar district use fruits as vegetable and for medicinal purposes. Another minor wild edible fruit locally known as '*Dansri*' (*Searsia mysorensis* syn *Rhus mysorensis*) was gathered from nearby forest areas of Thanagaji village of Alwar district. Its seeds are mixed with salt and oil and are consumed during autumn season (October) as snacks by tribal/local people of Rajasthan
- Samples from a population of *Sesamum indicum* var. *malabaricum* having about 2m high plants with 4-6 secondary branches and 50-60 capsules in main rachis was collected from canal side near Paltupur area of Baraut, Meerut; In Lansdowne area of Pauri district (Uttarakhand), samples of wild cucumber (*Cucumis sativus* var. *hardwickii*) from boundary of kitchen garden's where cultivated types (big sized fruits, eaten as raw), were also grown in cultivated habitat of Pauri district. The fruits of wild cucumber samples collected from forest fringes were small in size in comparison to samples from nearby cultivated sites may be because of gene flow between both cultivated and wild types. Wild cucumber (*Cucumis sativus* var. *hardwickii*) locally known as 'Yeladu', collected with rich variability in fruit size (4.5 cm - 12.5 cm length & 12 cm -23 cm width), weight (40 g - 281 g), shape (round, oval, elongate), colour (yellow, pale yellow, brownish yellow) and bitterness (sample having brownish yellow colour, locally known as 'Bhoj' is considered medium bitter while rest of the samples were highly bitter) from parts of Lansdowne, Rikhnikhal, Dhumakot and Corbett National Park buffer areas. Population of *Vigna dalzelliana*, a wild relative was growing mainly along road side in open, dry habitat along with *Cajanus scarabaeoides*-a

wild relative of pigeon pea. Sample of *C. scarabaeoides* having profuse fruiting was collected from same habitats. *Cannabis sativa* locally known as 'Bhangyul' cultivated in kitchen gardens in entire Rikhnikhal block for its seeds to use as a condiment to prepare chutney. Population of weedy form of *Perilla frutescens* var. *frutescens* was common in patches along the roads and open areas in the buffer zone of Corbet national park. *Pyracantha crenulata* locally known as 'Ghingaru',-a wild edible fruit, which generally ripens in the month of August, was collected with ripened fruits (late maturity type) from Raiba village of Lansdowne. Occurrence of *Solanum indicum* and *S. violaceum* was scanty in entire surveyed area of Pauri district. Samples of *Abelmoschus angulosus* var. *pungens* & *A. manihot* subsp. *tetraphyllus* were collected from buffer areas of park with limited population. In *Capsicum annuum*, a local genotype having orange yellow fruits is being grown in large scale in entire Lansdowne block. It has good demand in local market and sold as a colouring agent for namkeen.

- Diverse named landraces in paddy and wheat with good variability collected from remote areas of Champawat district of Uttarakhand. Landrace *Daulat khani* of wheat is popular and occupying larger area in comparison to others. In other crops/species variability was observed for fruit size, shape and colour in wild cucumber (*Cucumis sativus* var. *hardwickii*); and for grain colour (dull white, brown, dark brown, ash grey) and size in Perilla (*Perilla frutescens*). Population of weedy *Perilla* was observed in lower hills and plain areas of Champawat, Tanakpur and Haldwani. Wild species of *Abelmoschus angulosus* is cultivated in pokhri, Lohaghat for its roots. Its root is a good source of polysaccharides and root powder is mixed with rice flour for chapatti making. Unripe seeds of *Mucuna nigricans* are good source of polysaccharide and these seeds are used by local inhabitants as natural gum source.
- Indigenous knowledge on *Jhar ber* (*Ziziphus nummularia*) and bold sized ber (*Z. mauritiana*) was also gathered from local farming communities. As informed by local people a tree >100 years old, having sweet and tasty fruits was also sampled. Variability in ber for maturity, plant height, fruit shape, size and colour was observed from foot-hills of Himachal Pradesh and Jammu & Kashmir.
- Variability in ber for fruit size and colour; and in sesame for seeds colour was collected from parts of Sarishka and Ranthambore national park in Rajasthan. Among wild relatives, *Luffa acutangula* var. *amara* was commonly seen on farm fences in Gola Ka Vaas village in Sawai Madhopur and *Sesamum indicum* var. *malabaricum* was collected from Ranthambore national park. In Tehla block, tobacco cultivation is predominant; its two accessions were collected. Tobacco landrace has developed unique quality (preferred by hookka smokers across the northern region) and adaptive characters suitable to the climatic and edaphic conditions of the valley.
- Rich variability in rice landraces for husk colour, grain shape and size, awn, scented, early types was collected from interior areas of Kishanganj and Araria district in Bihar. Farmers informed that the cultivated area of majority of landraces is reducing gradually. During the survey, farmers have also informed that about 20 rice landraces have been eroded in last 15-20 years from this region. Ethno-botanical information on local leafy vegetables was also documented. *Malva verticillata* is most liked leafy vegetable, which is grown in kitchen garden by each family.
- Notable collections include semi-domesticated landraces of *Oryza nivara* (*Kokua bao*), deep water landraces from Lakhimpur and Dhimaji districts of Assam were collected with good variability. Some of them can withstand 6-8 feet water, and all differed in kernel shape and size, kernel colour, awns and plant morphology. Explored areas remain inundated in flood of

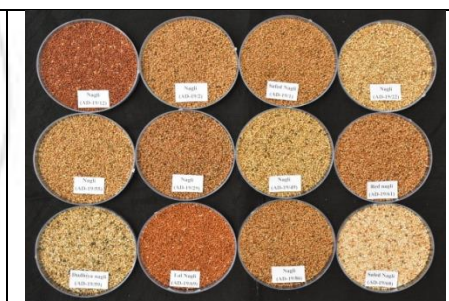

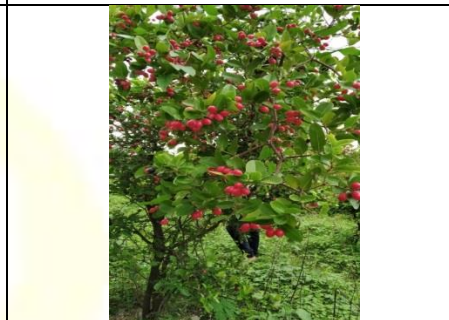

Brahmaputra for a long period from June to September. For such areas, these landraces are only option to farmers to grow and meet daily staple food requirement. Cucurbits, brinjal and rabi-season vegetables were grown in very limited scale mostly in kitchen garden at higher reaches.

- About 10-15 types of rajmah (mainly bush types) having mottled black, red, white, golden, purple grains are being grown by the farmers at large scale in and around Diyara land (near river bank), agricultural fields and kitchen gardens of Hailakandi district of Assam. The farmers are fetching good price through its sale (young pods, shelled beans /half matured grains are sold @ Rs 300-400/kg and dried ones @ Rs 100-120/ kg). Trailing type is also grown by a few farmers. The grains are used in the preparation of a local dish 'Panilawo' by adding fried fish in boiled grains. A paddy landrace *Beroim maimin* is used by Reyang tribe of Mizoram in preparation of local beverage called 'Arak', which is used in every occasion (birth to death), and also reported good in reliving pains during delivery. A local cucumber popularly known as "Gol kheera" having oval shaped fruit with brown scaly skin is also grown by the farmers. It is dual purpose, as young fruits are consumed as salad and matured fruit as vegetable. This local type is being grown by local farmers since 60-70 years. Its keeping quality is also good as compared to other long type local varieties of cucumber.

Institute Names and Their Full Form

IIHR	Indian Institute of Horticultural Research (Bengaluru)
CRRI	Central Rice Research Institute (Cuttack)
OUAT	Odisha University of Agriculture and Technology (Orissa)
VPKAS	Vivekananda Parvatiya Krishi Anusandhan Sansthan (Almora)
DOGR	Directorate of Onion and Garlic Research (Pune, Maharashtra)
IARI	Indian Agricultural Research Institute (New Delhi)
DRR	Directorate of Rice Research (Hyderabad)
IIVR	ICAR- Indian Institute of Vegetable Research, Regional Research Station, Sargatia, Kushinagar
BSKKV	Dr. Balasaheb Sawant Konkan Krishi Vidyapeeth, Regional Fruit Research Station, Vengurla, Maharashtra
CITH	ICAR-Central Institute of Temperate Horticulture, Srinagar and its Regional Station, Mukteshwar
PAU	Punjab Agricultural University in Ludhiana, Punjab
BAU	Birsa Agricultural University Kanke, Ranchi – 834006. Jharkhand
Dr. YSR	Dr.Y.S.R. Horticultural University Hydrabad
GKVK	Gandhi Krishi Vigana Kendra (GKVK) Bangalore
KAU	Kerala Agricultural University (KAU), Thrissur, Kerala
KU	Kumaun University,. Nainital,. Uttarakhand
IIHR-CHES	Central Horticultural Experiment Station, Aiginia, Bhubaneswar
CRIJAF	Central Research Institute For Jute and Allied Fibres (CRIJAF) Barrackpore Kolkata
CCSHAU	Chaudhary Charan Singh Haryana Agricultural University, Hisar (Haryana)
MPUAT	Maharana Pratap University of Agriculture and Technology, Banswara
NRC	National Research Centre Seed Spices, Ajmer, Rajasthan
DOGR	Directorate of Onion and Garlic Research
CSKHPKV	Chaudhary Sarwan Kumar Himachal Pradesh Krishi Vishwavidyalaya, Palampur, Himachal Pradesh
BCKV	Bidhan Chandra Krishi Viswavidyalaya, West Bengal
IIOR	Indian Institute of Oilseeds Research, Hyderabad
IIPR	Indian Institute of Pulses Research Kalyanpur, Kanpur, UP
IIMR	Indian Institute of Millets Research, Hyderabad
CSRI-NBRI	CSRI-National Botanical Research Institute, Lucknow
